

# IBM iSeries

---

OnX has decades of IBM experience and highly certified experts on staff who know iSeries systems inside and out. We provide hosting, monitoring, management, backup and recovery services for these systems.

---

## Mission-Critical Support for IBM iSeries

If you need help keeping your mission-critical IBM iSeries environments running at peak efficiency, you're in good company. Many enterprise organizations don't have certified skill sets on staff, while some need a secondary site for backup and disaster recovery. Whatever your need, rest assured OnX knows iSeries inside and out. We can help you manage your current investment, back up the data to one of our facilities or create a dual-site solution.

We provide a comprehensive suite of IBM iSeries services:

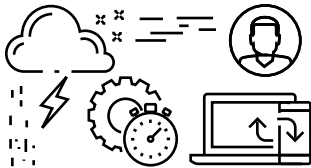

- > **Production cloud:** Our managed hosting services in our Tier III data centers address compliance for a broad range of regulatory agencies.
- > **Remote managed services and onsite upgrades:** We provide 24x7 alert monitoring, management, and remediation of critical systems, along with any required onsite iOS upgrades.
- > **High availability and disaster recovery (HA/DR):** Our HA/DR programs for IBM iSeries and x86 systems focus on in-depth testing with Letter of Test Performance for your audits/regulatory needs, runbooks, and business continuity planning.

Our decades of experience with IBM technologies and our highly certified experts ensure we can provide the support your critical iSeries and x86 systems need.

# Partner with OnX and Move IBM iSeries to the Cloud

OnX's Cloud and Managed Services let you hand off your IBM iSeries and x86 systems to us. We can manage them in our data centers, letting you focus on your core business and leave the backend infrastructure support headaches to us.

As a managed services provider with deep cloud expertise, we help companies stay focused on their strategic business initiatives. If you are running a legacy IBM iSeries environment, we should talk.

## Burstable Disaster Recovery

OnX provides burstable DR technologies, for any reason and for any length of time.

We can perform the restoration and switchover (and eventually the switchback) of IBM iSeries and x86 systems for users who are experiencing a disaster or outage. If you're just doing development and testing, the same services are available.

All charges are burstable at the time of need, billed monthly (with a one-month minimum). In the case of a disaster, charges can be packaged as disaster declaration expenses that can be claimed on insurance.

## iSeries-as-a-Service via OnX Managed Services

OnX's Cloud and Managed Services help you offload the burden of the day-to-day administration required to support your IBM iSeries environments.

### **Data Protection Services:**

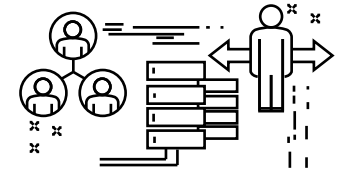

Protect mission-critical iSeries environments from downtime or loss of data.

### **Burstable DR-as-a-Service:**

Get in-depth DR testing that will help reduce capital expenditures and devote the savings to your company's strategic initiatives.

### **Remote Monitoring & Management:**

- > 24x7 enterprise-class monitoring
- > Access to our certified IBM skillsets
- > Perform operating system upgrades as required

## Why OnX?

As a leading provider of technology services to businesses around the world, we have a rare combination of experience assessing, designing, building and managing data center solutions — and providing crucial services for monitoring, backup and recovery.

Enterprise organizations tap into our three-decade track record working with some of the biggest names in technology, including our extensive experience with IBM. Our highly certified experts will look closely at your organization and help you find the right IBM iSeries services to protect your technology investments — and ultimately your business.
