

Backup-to-Azure Proof of Concept (POC) Trial Program

Test drive our Backup-to-Azure solution to help you make an informed decision and give you the confidence to leverage our Fully Managed BUaaS.

Two Week Proof of Concept for Managed Backup-to-Azure

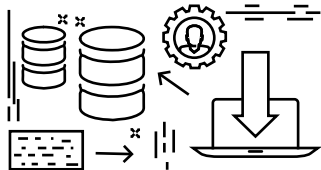

Interested in offloading your data backup administration responsibilities? Are you still backing up to tape? Not sure how a fully managed, enterprise-class cloud backup solution would work for your unique business requirements? Our Managed Backup-to-Azure Proof of Concept (POC) is simple to set up and designed with measurable success-based criteria to help you make an informed decision.

OnX will work side-by-side with your team to ensure the POC is customized to meet your needs for fully managed public cloud backup services. From the trial, your team will gain a thorough understanding of how data backup from your location to Microsoft Azure using Commvault would work best for you.

Important Questions the OnX POC Can Answer

- > Where will our data reside?
- > Do we have the ability to choose the region/data center?
- > How do we know our data is protected?
- > What are the hidden costs of the public cloud?
- > How do we get our data back if we decide pull it back in-house?

The OnX Backup-to-Azure POC will help you answer these questions, and determine the value of a fully managed data backup, replication, and restoration solution for your business.

The OnX POC Delivers: What to Expect

The OnX team will partner with you to set up trial access to the Data Protection portal for two weeks. From the portal, your team will be able to monitor critical success criteria, with access to check backup statuses, perform restores, and view reports. The scope for this two-week POC includes up to four protected systems (application and file system agents) and up to two terabytes of data.

POC Success Criteria

The OnX team will help you evaluate the outcome of the following target goals:

- > Initial backup is successful
- > Incremental/delta backups are processing and transferring as expected
- > Restore of SQL or app data is successful
- > Restore of file and folder data is successful

Fully Managed Enterprise-Class Backup

Flexibility

Get out of the data backup business, and let OnX manage your data backup 24x7 so you don't have to. Schedule your backups as often as required by your organization, at the times that are most convenient for you.

Security

Encryption secures your data at the source, in transit via secure connections, and at rest in the cloud.

Reliability

Industry-leading Commvault software and Microsoft Azure help us manage your backups safely and efficiently.

Retention

Keep your data in the cloud for as long as your business requires — up to 99 years!

Why OnX?

OnX is a leading provider of technology services to businesses around the world. Our vast experience assessing, designing, building, and managing data center solutions gives us a rare insight into managing the complexities of enterprise-level data backup and recovery in Microsoft Azure.

Our highly certified experts look at your business closely and help you find the right backup and recovery solution to protect your business and keep your customers coming back.
